

Clim-HEALTH Africa

THE OBJECTIVES AND GOALS

The Goal

To improve health outcomes by strengthening the resilience of African countries through improved management of the effects of climate variability and change.

FIND

To develop and test real-time forecasting and climate-informed planning methods in national decision-making.

OPERATIONALISE

To use research and forecasting information to support environmental and public health interventions.

SCALE-UP & SUSTAIN

To roll out the use of early warning and early response systems in order to prevent and mitigate public health impacts of climate variability and change in Africa.

Aims

To develop mechanisms and institutional capacity for implementation of climate-based public health early warning and response systems in Africa.

To utilise early warning and response systems to provide timely response to climate-sensitive diseases and conditions.

To develop and implement a climate change and health communication strategy.

To provide African countries priority support on urgent public health issues related to climate change.
